Barrager

1. The 7 oceans of the world are: The Indian, Arctic, North Atlantic, South Atlantic, North Pacific, South Pacific, and Southern Oceans

2. The energy to create wind comes from wind (for most ocean waves)

3.

- a. ripples form.
- b. waves grow larger.
- c. water rolls because of the wind.
- d. Waves forced upward.
- e. Waves break.

4. The tides are made by the gravitational pull of the moon and earth

5. The moon's gravitational pull is stronger on the Earth than the sun because the moon is so much closer than the Earth

6. (images)

7. Warm surface currents start at the equator and cool, so it sinks slowly, going back to the equator.

8. The Gulf Current more evenly distributes the temperature of the land it flows past.

9. In the equatorial regions, the water gets the most sunlight, and it does not flow out because of the Earth's rotation, so the water piles up on the western side

10. Describe the 5 phases of an El Niño. (10 pts.)
